

## SILVER SERIES

A solid structure that is resistant to break-in and a tamperproof lock: great care marks every stage of production of the SILVER Series range of armour-plated doors, to guarantee effective passive resistance to forced entry. The working drawing considers even the smallest detail, materials are selected on the basis of strict quality criteria and the manufacturing technologies employed are among the most advanced on the market. The SILVER Series is the fruit of modern, automated production processes that are synonymous with great accuracy and reliable components, and reflect the craftsman's attention to detail. This is why strength, functionality and beauty combine in SILVER Series armour-plated doors, meeting the customer's most demanding selective criteria in the best possible way.
