

SECURITY FOR EVERY REQUIREMENT

The armour-plated doors in the **SILVER** and **GOLD** Series are available in various models with different locking systems, to meet the user's many requirements in the best possible way.

LATEST GENERATION DOUBLE-BITTED LOCK.

Activated by a single key which operates three bolts and a spring latch at the centre, a lower lateral switchlock and a vertical upper pin, it guarantees an excellent safety-price ratio.

LOCK WITH INTER-CHANGEABLE CORE.

Practical and safe, this lock is supplied with a temporary core and a master-key for access during installation; the permanent core and relative keys are supplied in a sealed package.

LOCK WITH EUROPEAN PROFILE CYLINDER.

Functional and reliable, it is operated by a small key, and is provided with a covering cylinder "defender" which offers the best mechanical resistance to tampering.

DOUBLE LOCK.

An ideal combination: the main lock is a double-bit safety lock, while the cylinder service lock allows staff and associates to enter.
